

AVAILABLE AT THIS PRACTICE

STI and COVID tests, done in this visit.

This centre runs a sexual health panel from a swab or a urine sample, and a respiratory PCR that includes COVID. Both are collected here, during the visit you are already in — no referral and no separate lab trip. The swab or urine panel does not cover every infection: HIV, syphilis and hepatitis need a blood test, which is a separate order.

- Collected during today's visit — a swab, a urine sample, or a nasal swab
- Not a full STI check. HIV, syphilis and hepatitis need a blood test, and a recent exposure can be too early to show on any of these
- Whether either test is right for you is decided with the clinician you see today

Sex Health (STD) · Respiratory / COVID-19 PCR

Ask at the front desk.

Your clinician can tell you whether it is right for you.
