

AVAILABLE AT THIS PRACTICE

Legs ache for more than one reason.

An ultrasound answers one question: how blood moves through your veins. It does not measure what is in the blood — iron, thyroid, kidney chemistry, blood count. This panel reports those numbers to the clinician you are already seeing.

- One blood draw and a urine sample, taken here in the clinic.
- CBC, metabolic panel, iron studies with TSAT, TSH, NT-proBNP, urine protein:creatinine.
- It does not diagnose or rule out vein disease. Whether it is right for you is your clinician's call.

Vein Wellness • General Wellness

Ask at the front desk.

Your clinician can tell you whether it is right for you.
